

## Hyperbaric Oxygen Treatment for Failed Flap - Right Leg

**Initial Visit**

**Treatment 24**

**Treatment 35**

The patient, a 51-year-old female with diabetes, was presented to HyOx with right below knee amputation with failed flap. The patient received 40 hyperbaric treatments from 3/28/05 to 6/1/05. End Result: The patient was to have surgery and return to HyOx for 20 additional post-operative treatments upon further consultation from referring physician.
