This 48-year-old female with diabetes and morbid obesity was presented to HyOx with necrotizing fasciitis of the right groin. The condition made it difficult to be ambulatory and required her to use a rolling walker. During her hospitalization at a long-term acute care facility and while discharged to home, the patient participated in 80 hyperbaric treatments from 2/12/06 to 5/20/06 (118 days). End Result: The patient is completely healed and requires no surgery in the area. She also received physical therapy treatment and became ambulate up stairs again using a quad cane.
